

RT1100

# CEILING DIFFUSERS

## Round Architectural Plaque Diffuser RT1100

### STEEL OUTER CONE w/ Aluminum Plaque

The RT1100 diffuser is designed for use in open spaces and where a smooth architectural appearance is required. The RT1100 can be adjusted from horizontal to vertical discharge with a uniform 360° discharge pattern. The RT1100 can also be installed on exposed duct. An optional anti-smudge cone is available to reduce smudging on the ceiling.

The outer core of the RT1100 is spun from heavy gauge steel. Spring locks hold the removable, aluminum plaque in place. The standard retainer (safety) cables are supplied on all units. The discharge pattern is adjusted by removing the plaque face and changing screw positions.

### FEATURES

- Steel outer cone with aluminum plaque face
- 3-position plaque adjustment controls discharge pattern
- Spring lock mechanism allows easy removal of plaque face
- Retainer (safety) cables are standard
- Optional Anti Smudge Cone (ASC) to minimize ceiling smudging
- Standard finish is white (WH)
