

Heating and Cooling Coils

 **TUTTLE & BAILEY®**
The First Name In Air Distribution

The right coils, every time

Knowledge

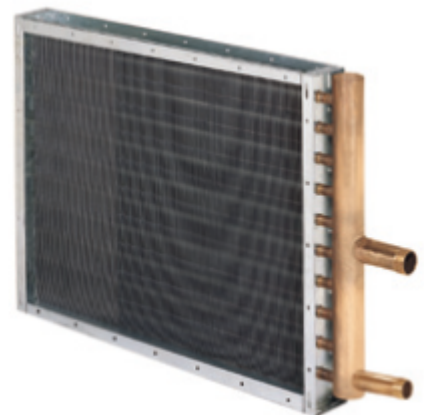

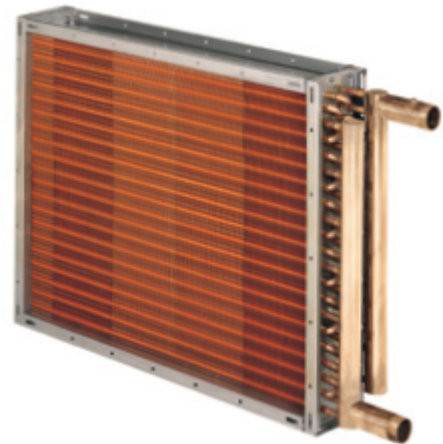

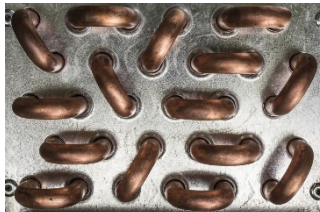

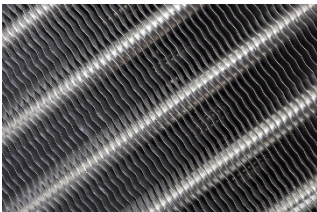

As a leader in the air distribution industry, Tuttle & Bailey engineers and manufactures heating and cooling coils for use with various HVAC&R applications. We produce a variety of products including grilles, registers, and terminal units. We are unrelenting in our efforts to increase both our technical and production capabilities, and growing into a major heating and cooling coil provider.

Heritage

Excellence in the industry remains our goal as much today as it has been over the past hundred and sixty years. It is our heritage as well as our future. We are committed to remaining leaders in the industry through research. Our engineering and manufacturing research teams are involved with the fundamentals of heat transfer and coil construction. Heavy research of coil geometries and manufacturing processes is also on the forefront of our current agenda.

Product

Tuttle & Bailey offers air distribution products; those products rely upon Tuttle & Bailey coils to provide a comfortable indoor temperature control. These coils use water, refrigerant or steam and are available in 1/2", 5/8" and 1" tube diameter. Many materials are available including copper fin, stainless steel casings and a large variety of tube thickness.

Certified

With assurance like the AHRI certification programs, you are sure to get the best standard coils. Our coils will perform in your applications better than non-certified coils. You can rest assured that our coil plant is also ISO® certified.

Support

Selecting the right coils for the application is the most important aspect of any coil project. Improperly selected coils can rarely be corrected at the jobsite.

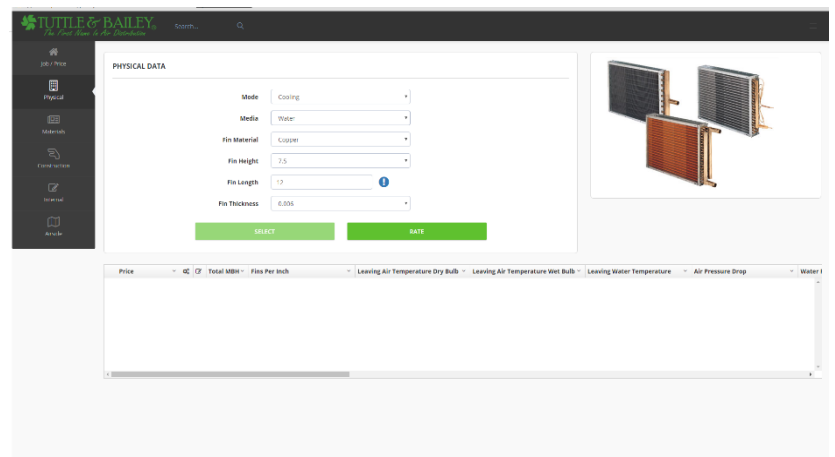

Tuttle & Bailey has a selection Windows based software package to help you get quotes fast. Pricing is available through our web based coil selection software, giving you the ability to professionally manage your projects with ease. Our customer version is available to you through your local Tuttle & Bailey office.

Serving you

Our job is to give you the coils you need when you need them. We offer numerous delivery options to meet your needs.

Quick ship cycles are available for all standard coils for 10 day, and 5 day lead times. Emergency shipment is available with 2 day lead times.

For standard coil needs, contact your nearest Tuttle & Bailey sales representative. For emergency shipment or unique applications, contact your Tuttle & Bailey office at 972-497-9128
